Wall Mounted Flagpole Instructions

1. Remove all wrapping materials and place unwrapped flagpole on wood support.
2. Find desired mounting location. Use bracket as template, level and mark mounting hole locations on wall.
3. Mount bracket on surface.
4. Once bracket is mounted, install the ornament by screwing the spindle into the truck. Do not grip ball to tighten, grip spindle/rod with vice grips and tighten. Tighten all nuts and set screws. An epoxy is recommended on all connections.
5. Feed one end of the halyard around the pulley of the truck and down the side of the flagpole. Tie both ends together forming a complete loop. Measure the distance between the grommets on your flag. Mark this distance on the halyard and attach snaps accordingly.
6. Place flagpole in mounted bracket and secure using expansion shields.
7. Fasten cleat into desired position on wall using the mounting screws provided.
8. Tighten halyard to cleat so the flag is secure.

****Budget wall mounted flagpoles do not come with mounting hardware****

Family Owned. American Made.
